

In the Specification:

Please amend the Specification as follows:

Please replace the paragraph beginning on page 3, line 5, with the following rewritten paragraph:

Along with the recent increase in resolution of liquid crystal display devices, the numbers of output lines GL1 to GL<sub>n</sub> and GR1 to GR<sub>n</sub> of the scanning drivers 101a and 101b are increasing. As a consequence, defects ~~enduring~~ the manufacturing process readily occur in the scanning drivers 101a and 101b at high probability.

Please replace the paragraph beginning on page 6, line 7, with the following rewritten paragraph:

Furthermore, as shown ~~in~~ Fig. 25, the output line GR2 may short-circuit at a short-circuit point 113 in the second scanning driver 101b, and simultaneously, a scanning line may be disconnected at a disconnection point 114 in the display area 100. In this case, assume that a high-level voltage is applied to the control signal terminal CL, and a low-level voltage is applied to the control signal terminal CR to correct the short-circuit point 113, as described above.
